**UI**
- Call "Businell Logic" to connect
any type of UI used

Models
- Create classes for each
individual table
- Enter prperties for each table

Business Logic
(If a small program this is not needed)
- Split up Crud in individual classes
(Delete, Read, Update, Create)
- Enter all logic for each model in the
individual class
- Create a "Facade" class
- In the facade class you make a instanse
of each logic model class

Data Logic
- Models
- UnitOfWork
- DbContext (if using EF)
